Technology in everyday life

Technology is almost everything in our life. Telephones and computers for communication. Cars, buses, trams and trains for traveling. Cooker, fridge, washing machine for help in the house. Communication devices can help us hear or see other person or make arrangements. Cars can help us go faster somewhere than on foot. Washing machine can help us be faster with the washing. But, there is the other side of the story, the bad one. Sitting in front of the monitor all day can't be good. You can hurt your eyes or something worse can happen. There are too many cars, traffic jams and of course, accidents. Machines in our homes spend too much energy or destroy the ozone layer. I think that, without technology, we couldn't be better, but, it's OK that we don't have to use it that much. We can go outside instead of sitting in front of monitor.
