Technology in everyday life

We live in 21st century and that is technology century. Every day we use lots of machines: computers, TVs and mobile phones. They help us a lot.

Take me, for example. I use a computer, a microwave, a mobile phone and a TV every day and I can't imagine my life without all of these. But, it wasn't always like that. In the past people were happy even without machines. Of course, they had to work harder, to do everything with their own hands.

Sometimes, I try to put myself in their place, in the past, but it's better like this – with computers, Internet and Facebook.

Some people think that machines are taking over the world, but I don't agree. They are here to help us and they can't replace humans. So enjoy new technology and all the good things that come with it!
