

C1a

Nowdays one of the biggest unsolved problem are stray dogs. What to do with them and how to get rid of them are two most asked questions.

First, there is neutering. By neutering number of stray dogs can be reduced. Doing this will protect them of getting some kind of disease, such as cancer or prostate disease. This will help them eliminate roaming and aggression. Furthermore, dogs will be a lot calmer and with that there will be less accidents and attacks by stray dogs.

Another possibility is adopting a dog. It is the right thing to do because in that way we are saving their lives and also providing them with the opportunity to have a better and more joyful life. They will surely feel happier in foster homes than in shelters. What potential adopters should realise is that not all of the dogs are there because they did something unacceptable. Most shelter dogs end up there because of human problems such as move or divorce. What is very important to mention is that all dogs in shelters are of good health and all of them give us is nothing but unconditional love.

To sum up, the problem of stray dogs can be solved by using one of these methods. It will make the world a better and safer place for living.
