Which two subjects studied in school are most useful for our future lives

In our country, Serbia, there are many different types of schools. In each of them there are at least ten different subjects. There are some subjects which are more important than the others. The subjects which are most useful are English and computer science.

First of all, English is a language that one can use in the whole world. It's very important to learn it because people all over the world use English as their official language. If you want to find a job or to travel somewhere, for instance, you should know it very well. It's very significant for our future lives.

As regards computer science, I believe that learning about computers is quite useful for all of us. We can't imagine any job without using computers. There are many computer programs and each of them helps in different jobs. Pupils in Serbia start to learn it early in the fifth grade in primary schools. They expand their knowledge in secondary schools.

These two subjects are the basis for further improvement and advancement in job as well as in our future lives.
